Machine Learning Scientist Intern

May 2022 - Aug 2022

- Worked on game meta balancing methods for various peer vs peer games, such as Pokemon video games
- Proposed method involves gradient-free optimization techniques like CMA-ES for balancing the game parameters while Monte Carlo based Nash RL methods are used for learning the best AI agent
- Resulted in a manuscript currently under review

Summer Technology Analyst (Intern)

May 2018 - July 2018

- Worked on UI part of a change management tool for business units using Angular 6
- Developed RESTful web services in Java for the change management tool, currently used in production

- Designed deconv-net based model for single image super-resolution on optical satellite images, achieved 0.55 dB PSNR over SOTA
- Investigated zero-shot techniques for super-resolution of optical satellite images
- *Advisor:* Dr. Biplab Banerjee

Technical Skills

Programming Python, C, Javascript

Projects

Sampling an action from a Q function in continuous action spaces

August 2021 - May 2022

- Investigating various sampling techniques, to efficiently sample actions from the Q function which would resemble Boltzmann sampling in discrete space
- Proposed method would enable agents to have better exploration than SOTA algorithms like DDPG, and would not have any assumptions on distribution like SAC
- *Advisors:* Dr. Guni Sharon

Learning heuristic function for large search problems

September 2020 - Present

- Investigating reinforcement learning based approaches for lifelong heuristic search algorithms
- Studying the scalability of such approximators for NP-hard problems
- Currently, extending our approach to multi-agent path finding (MAPF)
- *Advisors:* Dr. Guni Sharon, Dr. Sven Koenig

Light-Regularized-GANs for low light images

September 2019 - Jan 2021

- Added an intensity based regularisation to LightEnhancementGAN, to control the intensity of light added to the image without any external supervision

Open-Ended Visual Question Answering System

April 2018 - May 2019

- Designed an attention based multi-modal fusion model which gives a free flowing answer to a question based on video as it attends to both, question words and video while outputting every single word of answer

Word completion feature for GNU-Nano text editor

July 2016 - December 2016

- Authored a word-completion feature which completes the current word based on the text present in the open file
- This feature was incorporated in GNU-Nano, an open source project
